

Brand Strategy & Market Launch for Interpaws

Introduction

Interpaws is an AI-powered VPMS that's designed to help veterinary practices manage their schedules, exam rooms, and staffing more efficiently. Existing VPMS products like Idexx Cornerstone, VIA, and PedDesk provide off-the-shelf solutions, but they don't learn how each individual hospital operates. Interpaws uses AI to learn and adapt to the workflows of every individual hospital and helps solve over- or underscheduling problems. The app will be launched under Saguario Interactive LLC. The target market is made up of veterinary practice owners in the US and worldwide, with an average age of 43 years. The field is majority female, even though most practice owners are male.

Competitive Landscape

- Direct competitors: Idexx Cornerstone, Via Veterinary Systems, and PetDesk. These systems offer general appointment and client management features but do not adapt to each practice's unique workflow.
- Interpaws advantage: built by a developer with veterinary experience, the system learns the behaviour of each clinic, optimizes exam room usage and staff scheduling, and provides data-driven recommendations.

Marketing & Branding Strategy

Advertising Mix

- Digital advertising: Use Google Ads and LinkedIn ads targeted at veterinarians and practice owners. These platforms allow us to use location-based targeting and can reach practices searching for management software.
- Go to industry conferences like WVC to introduce Interpaws to many people physically
- Budget and frequency: Start with a small budget for online ads. Maybe around 100 a week. Run ads continuously for the first three months to build awareness. Print ads can be placed quarterly.

Brand Strategy & Market Launch for Interpaws

Social Media Strategy

Interpaws will focus on using Facebook, Instagram, and LinkedIn. Research shows that Facebook is a top platform for veterinarians (Allanlouie, 2025). Around 69% of adults in the US use Facebook, which makes it great for reach. Instagram is also popular and good for reach, too. LinkedIn is great because it connects us with practice owners and other veterinary professionals.

- Facebook: Create a business page to share clinic efficiency tips, showcase our success stories, and run targeted ads. Post twice a week. Encourage clients to leave reviews and join a community group.
- Instagram: Post engaging photos and shorts for the software in use. Post tips for managing busy clinics, and also post user testimonials.
- LinkedIn: Use LinkedIn to connect with practice owners and industry leaders. Share articles about IT in veterinary medicine and management, and updates on product features, once a week.
- Content themes: Educational posts about how AI can reduce scheduling conflicts.
- CTA: Each post should invite people to sign up for beta testing, demo scheduling, or an email list for launching updates.

Brand Image

Interpaws should be professional yet approachable. The brand should show efficiency, innovation, and compassion for professionals and pets. Visuals should show trust and modernity. Messaging should show that the system was built by a team that works in vet medicine.

Additional Methods

Word-of-mouth networking is great because when people talk about these things to other professionals

Partnerships: Partner with veterinary associations and continuing education providers to offer workshops about efficient practice management

Brand Strategy & Market Launch for Interpaws

Launch Timeline

Phase 1: Finalize prototype, refine algorithms, and prepare marketing materials. Set up social media accounts and a website. Get a small group of early testers from existing contacts.

Phase 2: Launch beta program with early adopters. Collect feedback on usability and functionality using surveys and interviews. Post content on Facebook twice weekly.

Phase 3: Analyze feedback and improve the product. Share BTS updates and case studies on social media. Run targeted ads on Google and LinkedIn.

Phase 4: Expand pilots to more clinics. Attend conferences to showcase Interpaws. Offer promotional pricing to pilot participants. Encourage reviews and testimonials on Facebook.

Phase 5: Finalize product features based on pilot results. Increase ad budget and share success stories. Announce an official launch date. Provide demos and webinars for interested clinics

Phase 6: Launch Interpaws to the public. Host a virtual launch event. Continue social media engagement, monitor KPIs.

Key Performance Indicators

- Social media engagement (likes, shares, comments)
- Follower growth on Facebook, Instagram, and LinkedIn
- Click-through rates on ads and posts
- Demo sign-ups and beta program enrollment numbers
- Conversion rate from sign-ups to paying customers
- Customer feedback and satisfaction scores

Conclusion

Interpaws offers a unique AI-powered solution that learns each hospital's individual workflow and boosts efficiency. This is something hospitals need. Interpaws will be a great benefit.
