October 26, 2025

Executive Summary

Problem: Most veterinary practice management systems are a “one size fits all” solution. Clinics end up over- or underscheduled, and exam rooms are either under- or overfilled, staff get stressed, and revenue gets lost.

Solution: Interpaws learns each clinic's workflow. It optimizes appointments, exam room use, and staffing. It gives clear scheduling suggestions and simple dashboards

Why Interpaws: Interpaws is built by a team with real veterinary experience and software skills. That means the product is actually built with the experience of a team that has worked in the vet medicine field before.

Business model: SaaS: one-time setup fee with a monthly subscription. Digital delivery keeps costs low and margins high.

Target: Veterinary practice owners and managers. US first, global later.

Advantage: Personalization with AI, fast onboarding, clean, simple UI. We focus on saving time and lowering stress.

Product / Service Plan

- **Core features**

- AI scheduling that learns the clinic workflow
- Smart exam room and staff utilization
- Daily/weekly scheduling recommendations
- Alerts for overbooking and underbooking patterns
- Simple analytics
- Role-based access; audit logs

-

Interpaws – Final Business Plan

- **Service & Onboarding**

- 1-2 hour remote setup + data importing (where available)
- Quick training for leads
- Short videos for staff
- Email & Chat support Monday - Friday, with emergency on-call for after-hours emergencies

- **Security**

- Encryption in transit and at rest
- Privileged roles
- Backups and basic incident response runbook
- Data privacy terms for client and patient data

Market Analysis

Customer profile: Practice owners and managers. The average veterinarian is in their early 40s. The field is majority female. Most practice owners are male. Clinics exist in every state with thousands nationwide.

Need drivers

- Chronic staffing pressure and burnout
- Inefficient room use and long waits
- Need simple data-driven planning without extra admin time

Go to channels

- Facebook, Instagram, LinkedIn
- Industry conferences for demos and networking

Customers: Who they are and why they need this

Primary: Independently owned for small to medium-sized clinics (2-10 doctors)

Secondary: Multi-clinic groups, specialty & emergency clinics

Why Buy

- Less scheduling headaches
- Better room and staff usage, which leads to more appointments completed
- Clear dashboards for staff and owners lead to faster decisions

Interpaws – Final Business Plan

Value

- Reduce overtime hours per week
- Reduce average wait time
- Increase completed appointments per room per day

Competitive Landscape

Direct competitors: Cornerstone, VIA, PetDesk, and other VPMS tools

Common gaps: Static scheduling and not learning how a hospital operates day to day. Bad UI.

Interpaws edge:

- AI that personalizes scheduling for each clinic
- Practical workflow design from real experience in Veterinary Medicine
- Clear recommendations in English

Plan for Potential New Competitors

If large vendors add AI scheduling, we will:

- Keep our models focused on practice-level patterns
- Monthly improvements with fast beta loops with clinics
- Partner with continuing education providers for credibility and good lead flow
- Defend our IP with trademarks and keep our algorithms as trade secrets

Organization & Management Structure

- Founder/CEO: Vision, partnerships, day-to-day operations
- Lead Engineer: AI/Infra, code quality, security
- Product Managers: Roadmap, user research, QA loops
- Marketing Lead: Ads, content, events.
- Customer Support: Onboarding, support, training
- Advisory board: Made up of veterinary professionals providing real-world feedback and credibility

Interpaws – Final Business Plan

Testing Procedure & Timeline

- Phase 1: Prototype + test plan, recruit 3-5 early testers
- Phase 2: Do a closed beta, do surveys, collect bug reports, and do interviews
- Phase 3: Analyze feedback, then prioritize bug fixes.
- Phase 4: Expand the pilot. Add 10 - 15 clinics. Do promotional pricing and track retention.
- Phase 5: Finalize first public version. Plan updates post-launch.

Market Testing Process

- Focus groups: 5-8 clinic staff per session + observe scheduling pain points
- Targeted surveys: Short surveys, 5-8 questions, meant to measure perceived value and user experience

Legal Structure, IP, & Risk Mitigation

- Saguaro Interactive LLC is the entity
- IP: Trademark for the Interpaws name/logo. Algorithms are trade secrets. Clear licensing terms are also made.
- Contracts for orders, uptime targets, MSA, and data processing
- Risk controls: Security policy basics, backups, vendor review checklists.

Brand

Logo: A simple paw icon with a circuit in the pad. Word “Interpaws” under it.

Slogan: Fewer bottlenecks, More care

Sample ad: Interpaws learns your clinic's flow. Get fewer bottlenecks, calmer days, and more completed appointments. Join the beta today.

CTA: Book a 15-minute demo

Marketing Plan Detailed

Channels:

- Google Ads and LinkedIn: Target owners and practice managers with a small daily budget to start

Interpaws – Final Business Plan

- Facebook & Instagram: Tips and tricks, short demos, testimonials. Target about 2 posts a week.
- Conferences: WVC and others. Booth or shared table with live demos and sales.

Content themes

- How to cut wait times without hiring
- Make every exam room count
- Get clients in and out

Budget

- 100 USD a week for 12 weeks
- Single CRM for demo requests and follow-ups

Lead handling

- 24-hour reply SLA. Do demos within 72 hours. Send a 1-page overview and case study.

Launch Plan

Pre launch

- Website, demo calendar, and beta sign-up.
- Seed testers from personal network

Beta

- Weekly updates, collect KPIs, fix top issues fast.

Pilot Expansion

- Add 10 - 15 clinics to the program. Offer early adopter pricing. Gather testimonials.

Public launch

- Announce launch date. Do demo webinars. Increase the ad budget. Publish 2-3 short case studies.

Post launch

- Monthly releases, work on the future road map, and ongoing support.

KPIs & Success Metrics

- Activation time from the contract to the first optimized schedule
- Average wait time and variance
- Rooms utilized per hour
- Staff overtime hours per week
- Demos to trials to paid conversions

Interpaws – Final Business Plan

Ethics & Social Responsibility

- Transparent AI: explain recommendations in plain English
- Privacy by default with minimal data collected
- Fair pricing for small clinics with clear cancellation terms.

Basic Financial Model

- Pricing idea
 - Setup: \$3000 one-time
 - Subscription \$300 a month (includes support and updates)
 - Optional add-ons like pro analytics
- Targets
 - 30 clinics paying for 1 year
- Cost posture
 - Cloud + development + minimal marketing keep things lean.Break-even is possible within a year or two.

Risks & Mitigations

- Slow adoption: Lean pilot pricing. Show time saved metrics early
- Data concerns: Clear data security policy, encryption, audit logs, and quick incident response policies.
- Big vendor copycat: Ship faster. Add in deep clinic-level learning. Promote a strong brand story
- Support load: Self-help guides with short videos. Launch week on call.

Conclusion

Interpaws makes scheduling simple and smarter for veterinary practices of all sizes. We help teams do more with less stress. With practical AI and a large market, we can grow and deliver real value to busy hospitals.
